H&W Computer Systems, Inc. announces Day One support for z/OS 1.10

BOISE, Idaho – September 26, 2008 – H&W Computer Systems, Inc. (H&W) today announced Day One support for its software running under IBM's z/OS operating system, version 1.10. Day One support is part of H&W's ongoing commitment to assure customers that its software will be ready to integrate smoothly into their environment, no matter how soon they choose to upgrade operating systems. This support is available for H&W's SYSB-II, SYSD, CPMS, WebTek, SYSS, SYSJ, SYSM, and Wizard Mail software.

"At H&W, we recognize that some of the largest companies and organizations in the country rely on our software as a crucial means of conducting their business," said Chuck Weir, Vice President of H&W's Enterprise Management division. "Because of this, we invested the time and resources to make sure our software was ready for Day One support with this newest release of z/OS."

H&W creates mainframe software that helps companies perform operations throughout more of the business day, or perform those operations more efficiently. To give customers confidence that its products are ready for use with new IBM software releases, H&W participates in the IBM vendor program.

"At H&W, we do the work to ensure our software is of the highest quality," says Johnathan Crossno, senior product manager. "We want to make sure we are providing the value that customers expect."
