H&W supporting its industry-leading software Day One for new z/OS 3.2

BOISE, Idaho – September 30, 2025 – H&W Computer Systems is announcing that it's ready to provide Day One support for its industry-leading SYSB-II® software with z/OS 3.2, which IBM released September 30, 2025.

H&W is offering Day One support to give customers confidence that the SYSB-II software will work with the new version of the z/OS operating system, as soon as the first day of its release. "Many of our customers want to embrace the new z/OS enhancements as they become available," said H&W CEO, Nancy Edwards. "We understand that we are a critical part of their infrastructure, and we are committed to supporting SYSB-II with the new z/OS on day one of it becoming generally available. We make sure SYSB-II will seamlessly operate after an upgrade so our customers can focus on what they do best, running their business."

SYSB-II allows mainframe CICS applications to stay online and update VSAM files while batch also updates the same VSAM files. This means companies can ensure current service hours, extend business hours, or expand to more time zones. For more information about SYSB-II, visit https://www.hwcs.com/technology/sysb-ii/.
